

Problem statement

predicting the house price in USA.To create a model to help him estimate of what the house would sell for.

```
In [1]: import numpy as np  
import pandas as pd  
import matplotlib.pyplot as plt  
import seaborn as sns
```

```
In [2]: df=pd.read_csv("instagram csv")
```

To display top 10 rows

```

```

To train the model - MODEL BUILD

Going to train linear regression model; We split our data into 2 variables x and y where x is independent var(input) and y is dependent on x(output), we could ignore address col as it is not required for our model

```
In [21]: x=df1[['Saves', 'Comments', 'Shares', 'Likes', 'Profile Visits',]]  
y=df1[['Shares']]
```

To split the dataset into test data

```
In [22]: # importing lib for splitting test data  
from sklearn.model_selection import train_test_split
```

```
In [23]: x_train,x_test,y_train,y_test = train_test_split(x,y,test_size=0.3)
```

```
In [24]: from sklearn.linear_model import LinearRegression  
  
lr=LinearRegression()  
lr.fit(x_train,y_train)
```

Out[24]: LinearRegression()

```
In [25]: print(lr.intercept_)  
  
[1.77635684e-15]
```

```
In [26]: print(lr.score(x_test,y_test))  
  
1.0
```

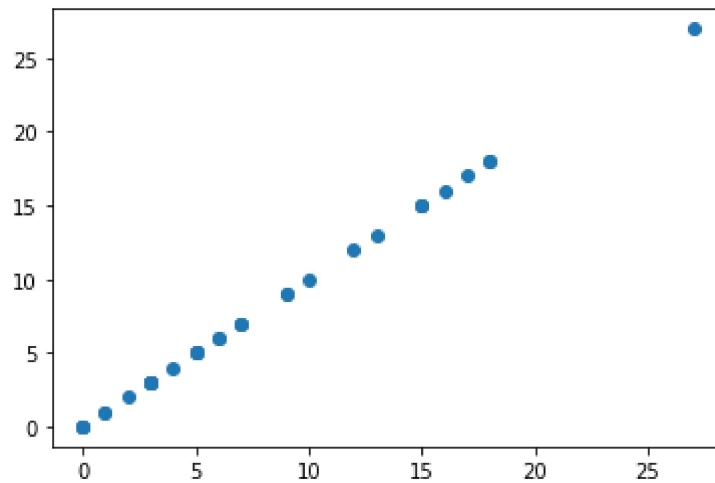

```
In [28]: coeff=pd.DataFrame(lr.coef_)  
coeff
